Electronics designer (Hard- & Software)

Nauticast GmbH is a company specializing in the field of maritime AIS technology. Ever since the pioneering days of AIS-technology in the early 2000s, Nauticast AIS devices played a major role in the maritime market.
As a vital part of our product development team we are looking for an electronics designer.

Tasks:
- Hardware and software development of marine electronics
- Maintenance and improvements of Factory Acceptance Tests (FAT)
- Embedded Systems

Technologies and Tools required
- PCB design (Altium Designer)
- Embedded RTOS (C++)
- C# development in Visual Studio
- VHF and GNSS systems

Skills:
- Hardwaredesign and related programming
- Enthusiasm and Commitment
- Communication in German and English both in writing and orally
- Interest in maritime activities
- Hands-on mentality

Formation/Experience:
- Minimum bachelor's degree (university or university of applied sciences) preferably in Electrical Engineering, Mechatronics or Physics
- Minimum 1 year working experience in professional development

We offer to directly participate in interesting and exciting technical projects in a very relaxed and informal corporate culture. Working hours are highly flexible and should be in the range of 20 to 38.5 hours per week. Minimal gross salary of the position according to Kollektivvertrag is € 2,461 per month on a 38.5 hours/week basis. Individual agreements will be discussed depending on educational background and working experience.
We are looking forward to your application addressed directly to the company director Vinzenz Janik at janik@nauticast.com.
